My research focuses on program comprehension at the K-12 level. Contributions include the investigation of factors critical to program comprehension for young learners, code comprehension strategies for struggling learners, and *Personalized Assessment Worksheets* for Scratch (PAWS) tool, a custom assessment generator software for Scratch projects. I was motivated to pursue this doctoral research due to my passion for making computer science instruction accessible and effective to people from under-served communities. Through this work, I hope to make computing accessible for everyone and to close the digital divide in today's increasingly technological world.
